RE: Wilson - Silverbell Mine

Dear Mr. Miller:

We have not received the sample analysis of the Wilson - Silverbell Mine water. The submittal of the water analysis to the Division of Oil, Gas and Mining and this office was discussed during our April 10, 1984 inspection and in the Division of Oil, Gas and Mining May 9, 1984 letter to Mr. Haubold.

Therefore, we request that UMETCO submit a report on the Wilson - Silverbell wastewater to this office by August 6, 1984. The report should include information of the current flow rate, disposal, chemical and radiological data, as well as future plans for wastewater control at the mine.

A search of our files does not indicate any approval was issued for a wastewater system at the facility. As you are aware, wastewater systems must have approval from this office. If the wastewater system is still in use, also please submit all available design information and as-built plans for the system by the above date.

Sincerely,

Fredrick C. Pehrson, Chief
Permits and Compliance Section
Bureau of Water Pollution Control
